

Rahal Backend Team Roles & Architecture

This document describes the backend team structure, roles, dependencies, and execution order for the Rahal AI Travel Planner project.

Member 1 - Destinations Lead

Build destinations module: CRUD, seed Egypt cities, attractions system. No dependencies. Used by Trips and AI.

Member 2 - Hotels Lead

Build hotels module: CRUD, search, seed data. No dependencies. Used by AI, Trips, Bookings.

Member 3 - Trips Engine

Build trips system: save AI trips, CRUD, itinerary storage. Depends on Hotels and Destinations.

Member 4A - AI RAG Engineer

Build data layer for AI: MongoDB retrieval, prompt engine, context injection. Depends on Hotels and Destinations.

Member 4B - AI OpenAI Engineer

Build AI features: trip planner, chatbot, hotel recommendation AI. Depends on RAG layer and Trips.

Member 5 - Bookings Module

Handles booking requests, status management. Depends on Trips, Hotels, AI suggestions.

Member 6 - Stripe Payments Engineer

Handles Stripe checkout, webhooks, subscription lifecycle. Depends on subscriptions and users.

Execution Order

Phase 1: Destinations + Hotels (parallel)

Phase 2: Trips + AI RAG Layer

Phase 3: OpenAI AI + Bookings

Phase 4: Stripe Integration

Dependencies Flow:

Destinations → Trips → Bookings → Stripe

Hotels → Trips → AI → Bookings

RAG → AI Engine → Trip Planner
